

TRANSFORMATIVE ODISHA @2036 :

Leveraging Demographic Intelligence for Development

FACTSHEETS

ODISHA DEVELOPMENT INITIATIVE

CHALLENGES | OPPORTUNITIES | WAY FORWARD

DEMOGRAPHIC TRANSITION IN ODISHA

The demographic transition in Odisha, marked by a rapid decline in fertility rate and an ageing population, underscores critical changes demanding attention.

Odisha's Total Fertility Rate (TFR) has dropped by 14%, falling from 2.1 in NFHS-4 (2015-16) to 1.8 in NFHS-5 (2019-21)—well below the replacement level. This sharp decline contributes to a projected 61% decrease in the population growth rate from 2011 to 2036. Despite fewer births, the elderly population is expected to surge from 0.39 crore in 2011 to an estimated 0.82 crore by 2036. With the median age projected to rise from 26 to 36 years (Population projection for India and States by the Technical Committee, ORGI, 2020), Odisha's shifting age structure will challenge economic growth, healthcare, and social support systems.

FERTILITY

The current TFR of 1.8 is projected to be 1.48 by 2036 (Population Projection for Odisha using Bayesian Approach, 2021-2036).

MORTALITY

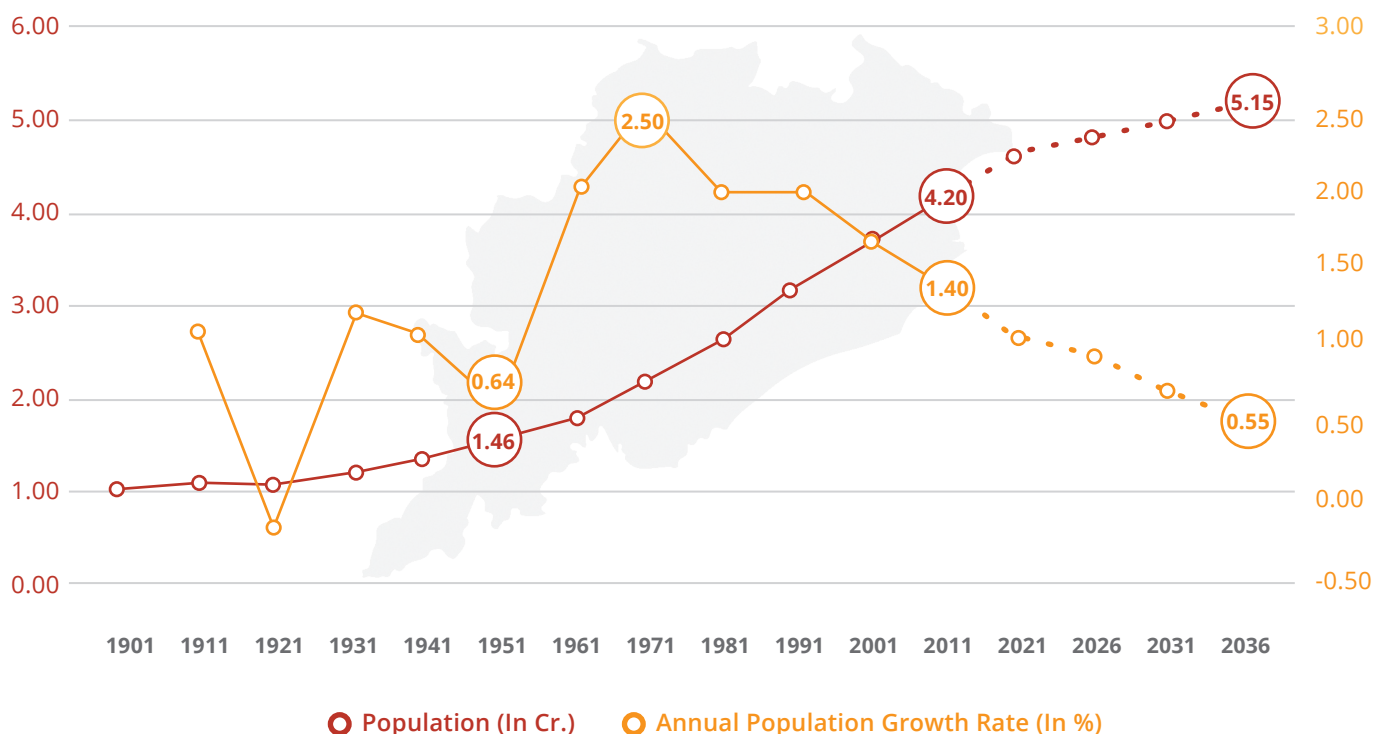

Odisha's Crude Death Rate (CDR) dropped significantly from 15.5 in 1973 to 7.3 in 2020 (SRS), still it remains the second-highest in India. The Infant Mortality Rate (IMR) declined from 39 in NFHS-4 to 33 in NFHS-5, currently below the national average of 35.2, marking a significant milestone.

LIFE EXPECTANCY AT BIRTH (LEB)

Odisha's LEB improved from 45.7 years in 1973 to over 70 years in 2018, adding 25 years over the past 45 years.

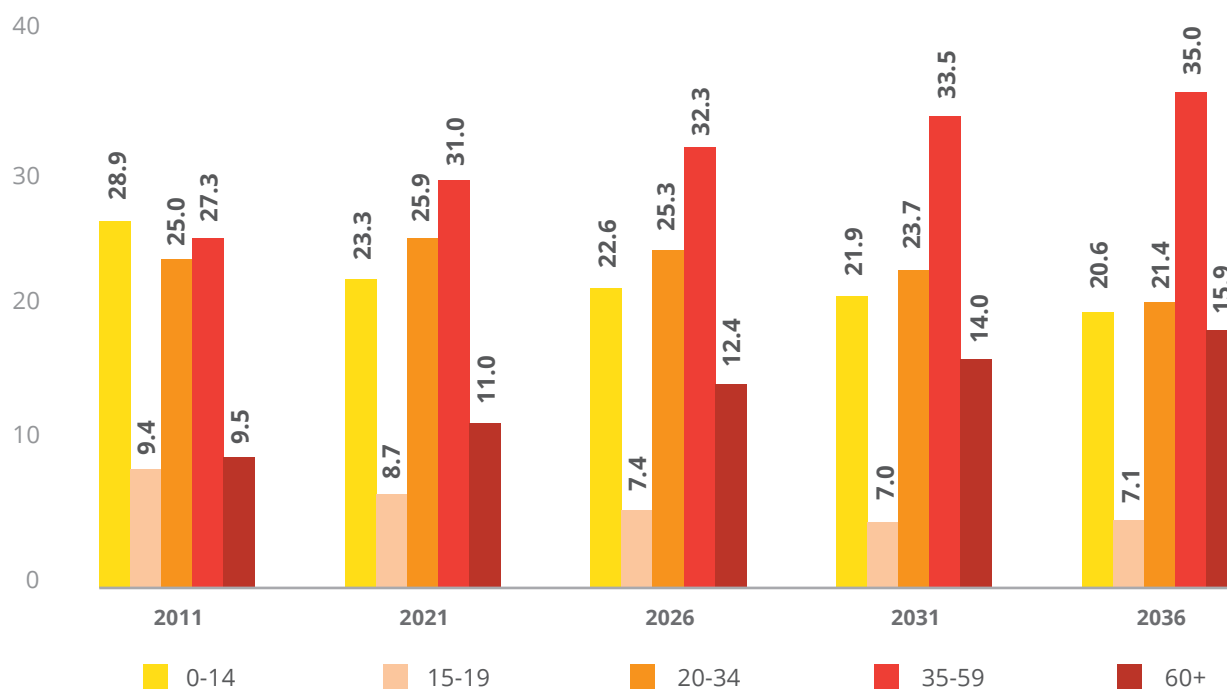

POPULATION GROWTH IN ODISHA: 1901- 2036

{Source: Census of India 1951-2011; Population Projection for Odisha using Bayesian Approach, 2021-2036}

Odisha is progressing towards advanced stages of demographic transition, characterized by decline in birth rate and death rate and increased longevity.

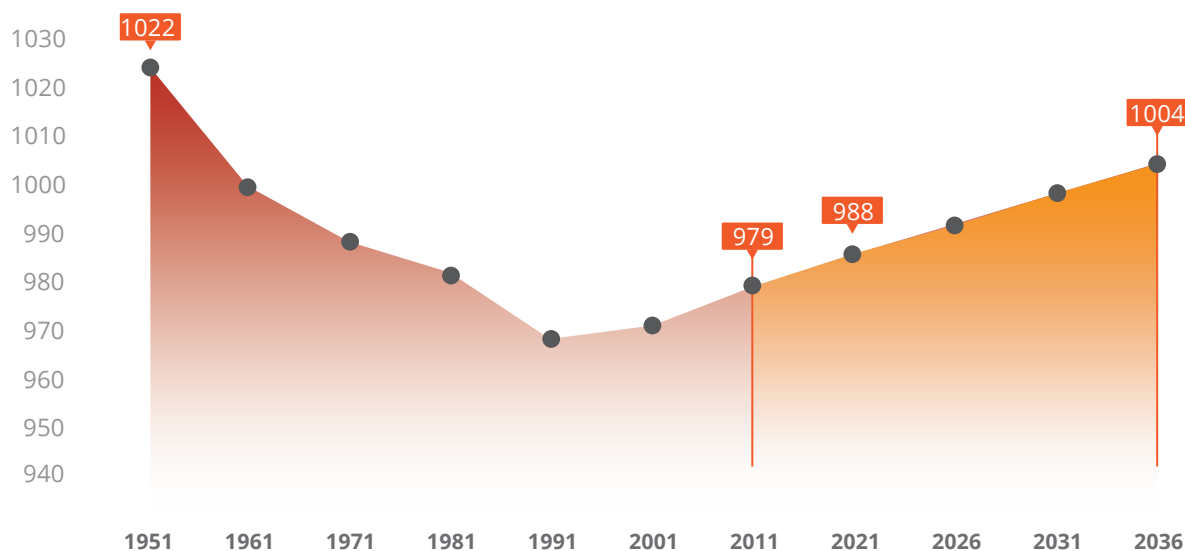

AGE-WISE POPULATION DISTRIBUTION (IN %)

{Source: Census of India 1951-2011; Population Projection for Odisha using Bayesian Approach, 2021-2036}

- Odisha's child and youth population will decline significantly by 2036, requiring a rethinking of the education system and its impact on the economy.
- While a modest rise in the working-age population offers economic potential, a growing elderly population will significantly increase old age dependency in the state.

CHANGE IN SEX RATIO FROM 1951 TO 2036

{Source: Census of India 1951-2011; Population Projection for Odisha using Bayesian Approach, 2021-2036}

- Sex ratio is projected to exceed 1000 by 2036, indicating progress toward gender balance across all ages
- The elderly (60+) sex ratio is expected to rise significantly, reaching 1170 for the 80+ age group, increasing vulnerability

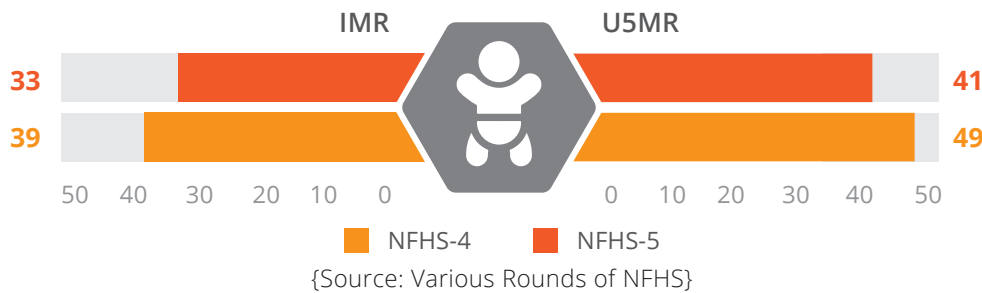

CHALLENGES OF DEMOGRAPHIC TRANSITION IN THE STATE

Odisha's demographic transition shows decline in TFR, IMR, sex ratio at birth, and increase in elderly population reflecting improved healthcare. Therefore, strategic planning is essential to harness Odisha's demographic dividend for sustainable growth.

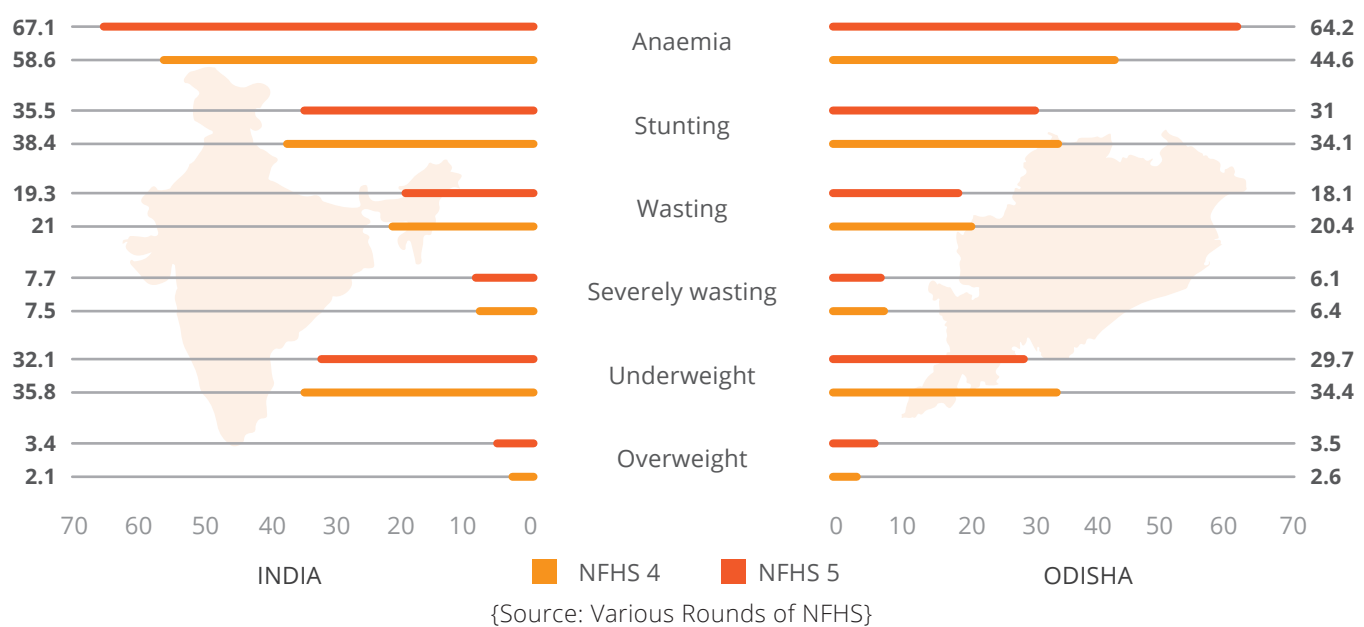

HEALTH & NUTRITION

ODISHA IMR & U5MR

The decline in IMR from 39 in 2015-16 to 33 in 2019-21, below the national average of 35.2, marks a major milestone for Odisha.

NUTRITIONAL STATUS OF CHILDREN (AGED 0-5 YEARS)(IN %)

- More than one-third of the children still suffer from any form of nutritional challenges, which affect both the quality and quantity of human resources.
- The tribal districts are facing nutritional deficits among children whereas the coastal districts are having increasing cases of anaemia and overweight.

SOME EMERGING HEALTH CONCERNS

With 64.9% of women and 28.5% of men aged 15-49 anaemic, the significant gender gap in anaemia rates highlights health disparities that could hinder productivity and overall well-being, especially for women.

- Contraceptive use has risen, but over 40% rely on less effective traditional methods, increasing the risk of STIs and STDs. (STIs - Sexually Transmitted Infections, STDs - Sexually Transmitted Diseases)
- Modern contraception is dominated by female sterilization and pills, placing the burden on women and infringing on their reproductive rights.

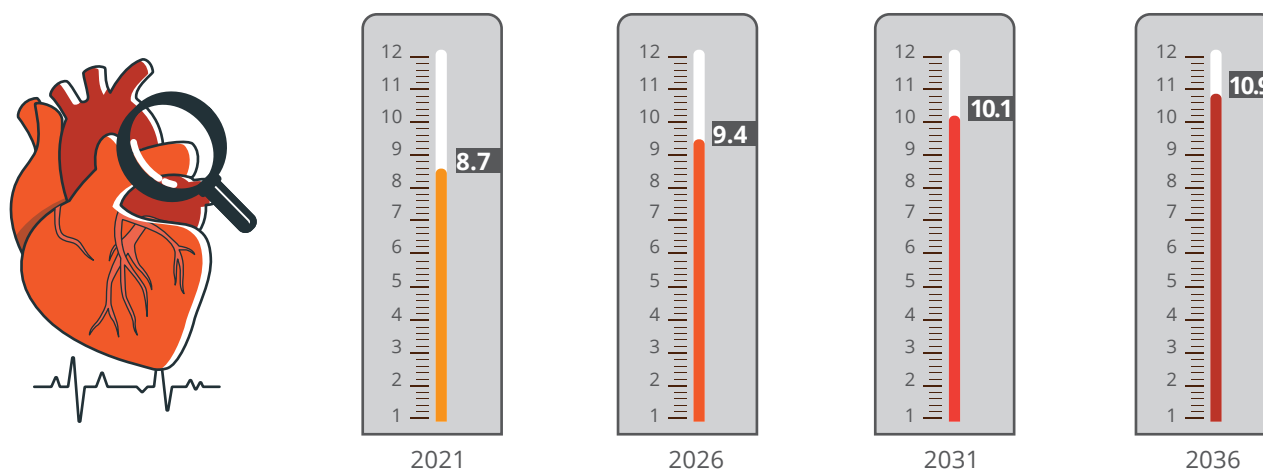

While tobacco use among men in the state declined from 55.9% in 2015-2016 to 51.6% in 2019-2021, its rise among women from 17.3% to 26% during the same period poses a serious health concern.

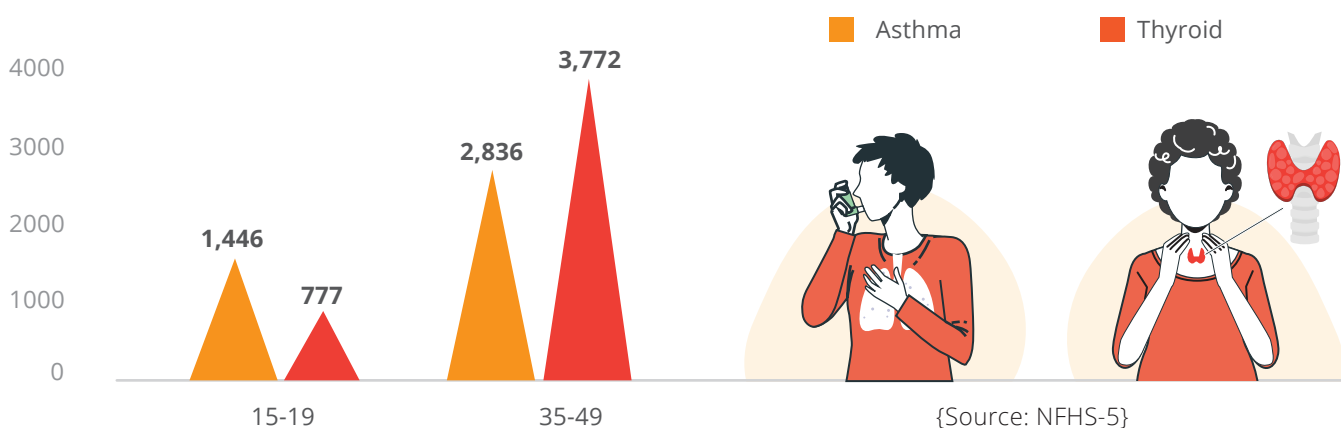

Excessive substance abuse in Odisha fuels domestic violence, crime, and reduced productivity. 31% of women aged 18-49 face domestic abuse, with 32% experiencing sexual or physical violence, and 4% suffering from both.

NUMBER OF HYPERTENSION PATIENTS (IN MILLIONS) BY 2036 IN ODISHA

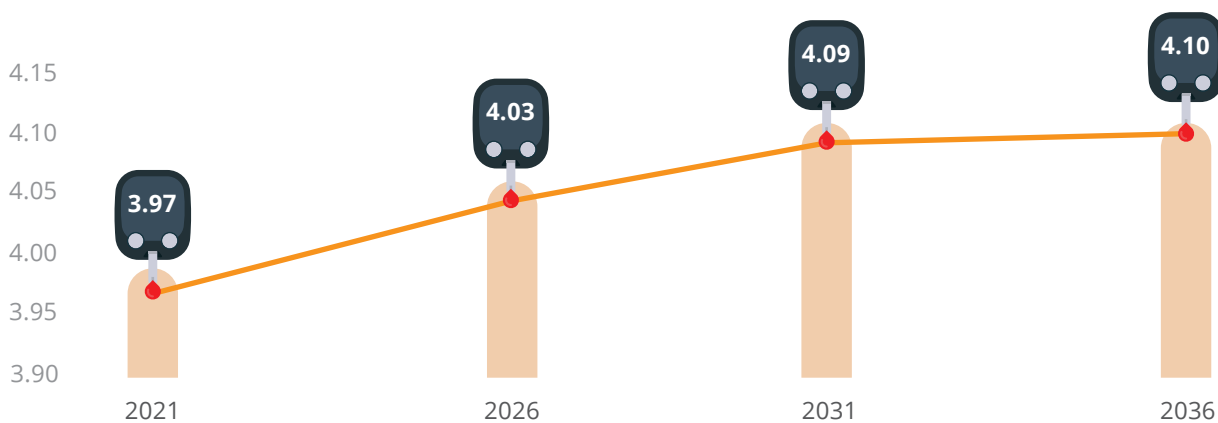

{Source: Estimated using NFHS-5, LASI data}

PREVALENCE OF ASTHMA AND THYROID IN WOMEN (PER 100,000 POPULATION) ACROSS DIFFERENT AGE GROUPS

{Source: NFHS-5}

NUMBER OF DIABETIC PATIENTS (IN MILLIONS) BY 2036 IN ODISHA

{Source: Estimated using NFHS-5, LASI data}

- It is expected that the prevalence of hypertension in females aged above 15 will exceed that of males by 2036.
- In 2021, 3.97 million people aged 15 to 49 had diabetes, projected to increase to 4.10 million by 2036.

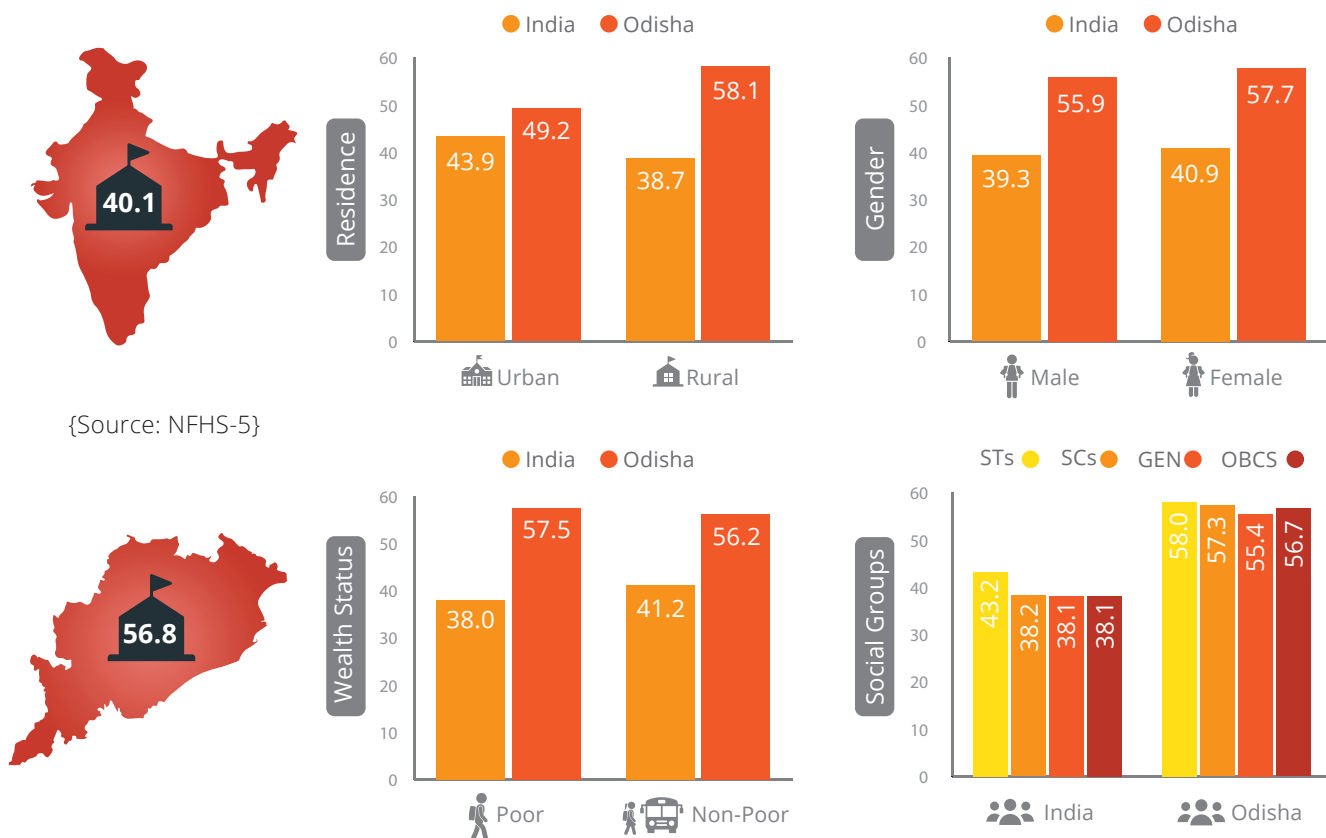

EDUCATION

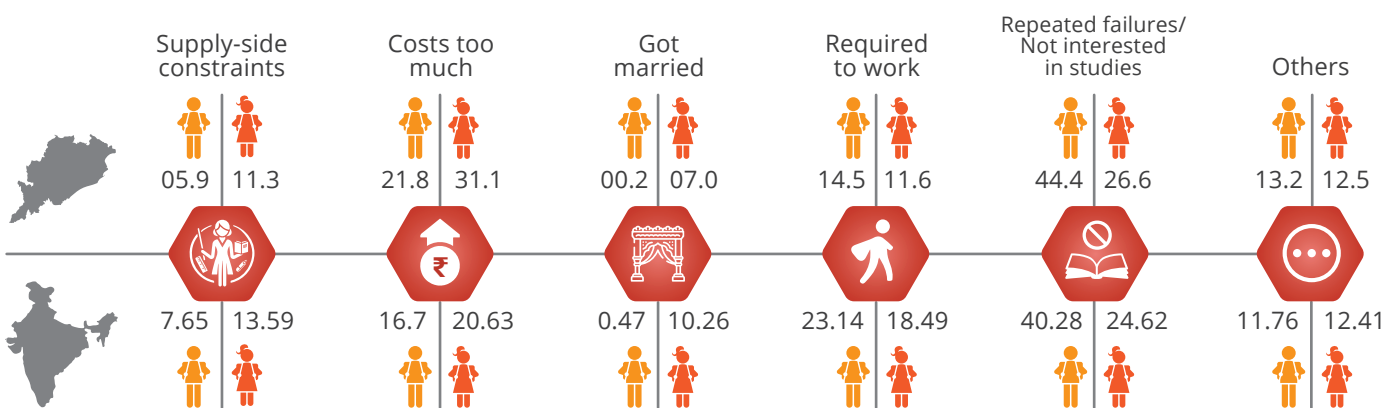

Odisha has made strides in education, with a literacy rate rising from 72.87% in 2011 to 78.8% in 2019-21.

Gross Enrolment Ratio (GER) of 95.4% at the elementary level drops to 43.6% at the higher secondary level. Challenges also persist, including high dropout rates among girls due to household duties and child marriage, and academic performance issues with only 43% of grade III students meeting proficiency in language skills. As the child population (below 15 years) is projected to decline from 23.3% in 2021 to 20.6% by 2036, small schools have become common, particularly in remote tribal areas, where accessibility is crucial.

PERCENTAGE OF CHILDREN AGED 2-4 YEARS ATTENDING PRE-SCHOOL, 2019-21 (IN %)

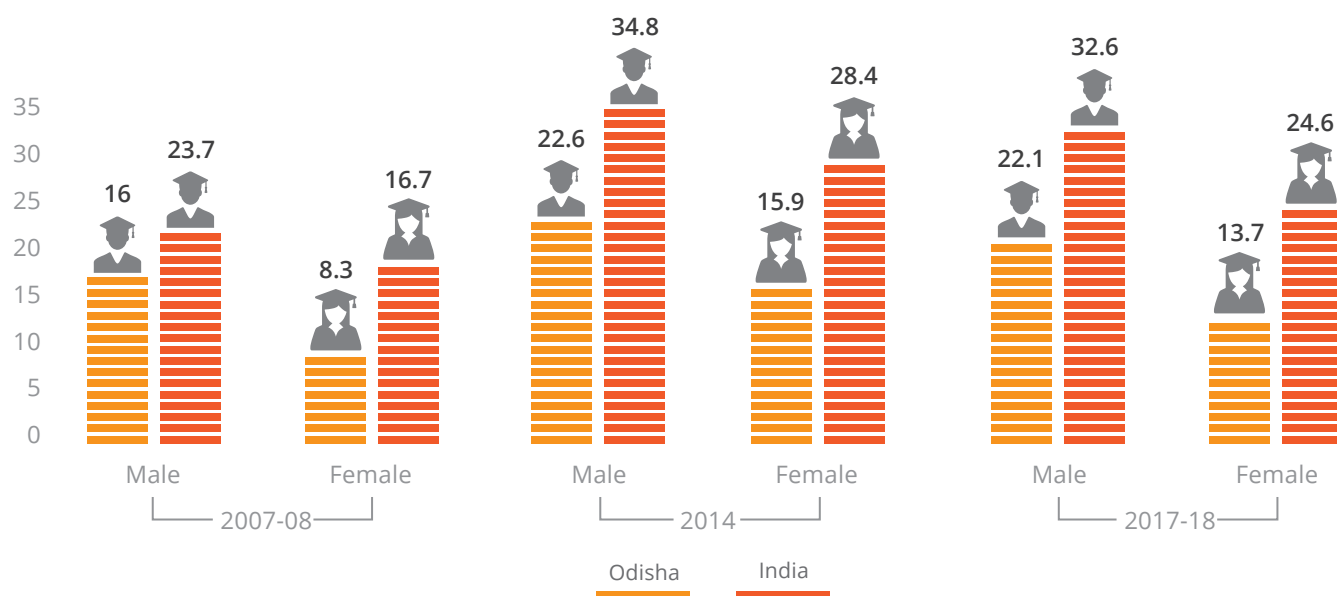

DISTRIBUTION OF CHILDREN (AGED 6-17 YEARS) BY REASONS FOR NOT ATTENDING SCHOOL IN ODISHA AND INDIA, 2019-21 (IN %)

{Source: NFHS-5}

More than one-third of the children still suffer from any form of nutritional challenges, which affect both the quality and quantity of human resources.

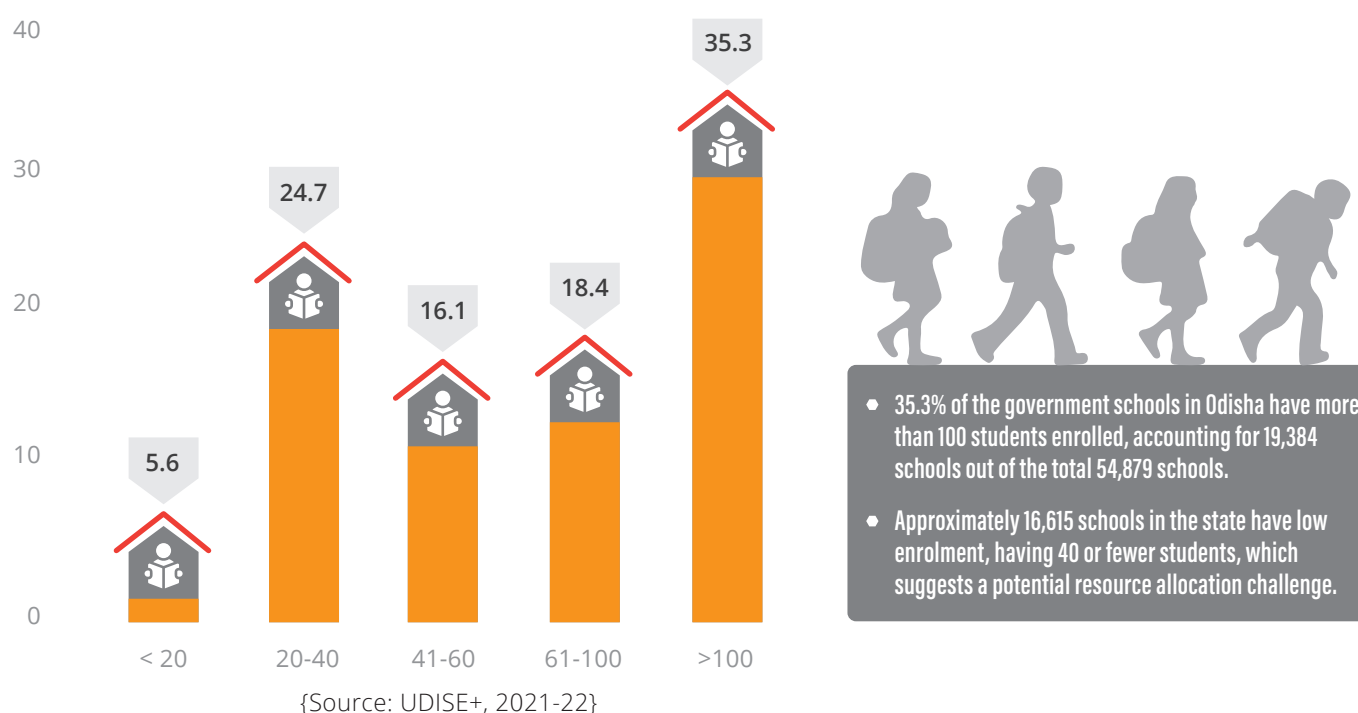

AGE-SPECIFIC (AGED 18-23) ATTENDANCE RATIO FOR HIGHER EDUCATION IN ODISHA (IN %)

{Source: National Sample Survey on Social Consumption in Education, respective years}

While both Odisha and India have shown improvement in reducing gender gaps from 2007-08 to 2017-18, Odisha's gender gap (8.4 in 2017-18) remains slightly higher than India's average (8.0), though the difference has narrowed over time from when Odisha's gap was 7.7 compared to India's 7.0 in 2007-08.

DISTRIBUTION OF GOVERNMENT SCHOOLS BY ENROLMENT SIZE (IN %)

{Source: UDISE+, 2021-22}

VOCATIONAL AND TECHNICAL EDUCATION

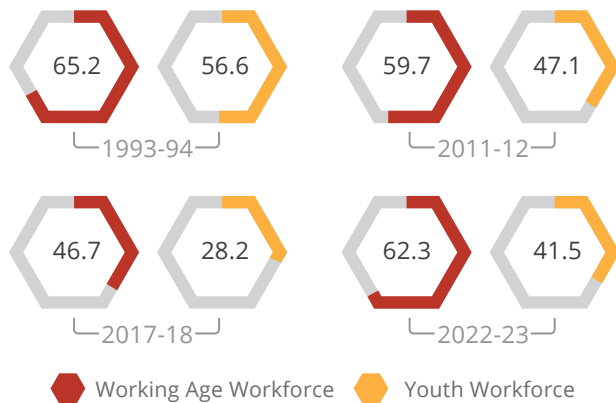

- Only 949 of 11,916 secondary and higher secondary schools offer vocational courses, leaving most students without formal training.
- Just 2.6% of Odisha's higher education students enroll in technical courses, far below states like Kerala.
- The high per-student cost of technical education (Rs. 35,345) limits access, especially for rural and female students.

EMPLOYMENT

Odisha, recognised as one of India's fastest-growing economies, recorded an impressive Gross State Value Added (GSVA) growth of 7.8% in 2022-23, surpassing the national average of 7.1%. The state's labour force stands at 21.3 million, reflecting a Labour Force Participation Rate (LFPR) of 46%. However, self-employment dominates the labour structure at 63.2%, often lacking social security and retirement benefits.

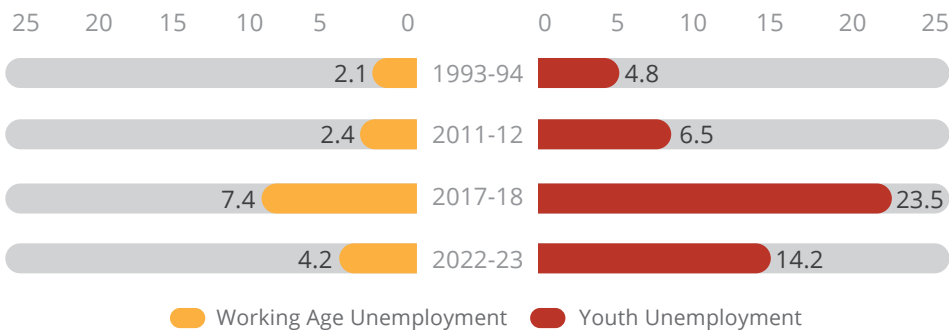

WFPR OF YOUTH (AGED 15-29) AND WORKING AGE POPULATION (AGED 15-64) IN ODISHA (IN %)

- Both the working-age population and the youth workforce have experienced a significant decline in their workforce participation rates (WFPR)
- After a dip in 2017-18, there has been a notable recovery in the WFPR by 2022-23, signaling a potential rebound in labor market engagement.

{Source: Computed from the unit-level datasets of different NSSO Employment and Unemployment Survey (1993-94 & 2011-12) and the Periodic Labour Force Survey (2017-18 & 2022-23)}

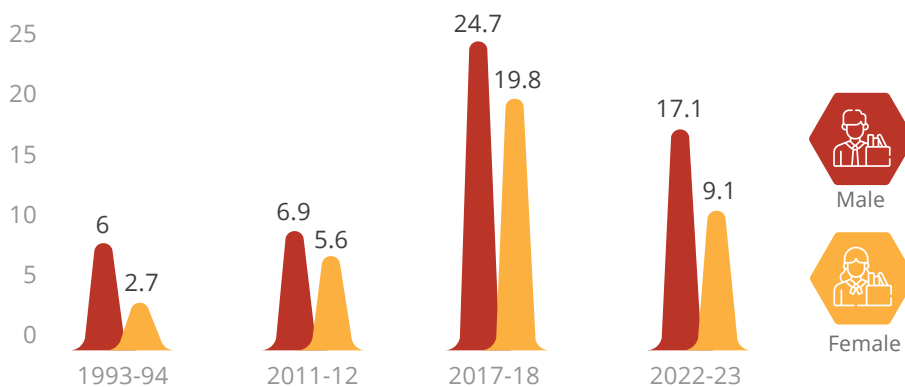

UNEMPLOYMENT RATE OF YOUTH (AGED 15-29) AND WORKING AGE POPULATION (AGED 15-64) IN ODISHA (IN %)

- Both the working-age population and youth unemployment rates have seen significant increases over time, peaking in 2017-18, where youth unemployment reached a high of 23.5%, and working-age unemployment reached 7.4%.
- By 2022-23, there has been a notable decline in unemployment rates for both groups, with working-age unemployment dropping to 4.2% and youth unemployment decreasing to 14.2%, indicating some recovery in the labor market.

{Source: Computed from the unit-level datasets of different NSSO Employment and Unemployment Survey (1993-94 & 2011-12) and the Periodic Labour Force Survey (2017-18 & 2022-23)}

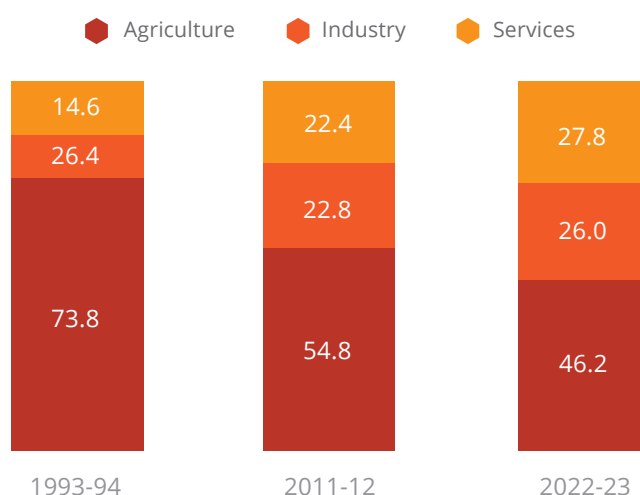

GENDER-WISE UNEMPLOYMENT RATE IN YOUTH (AGED 15-29) IN ODISHA (IN %)

The Unemployment Rate for Odisha's youth (aged 15-29 years) has fluctuated significantly over time. In 1993-1994, male unemployment was 6% and female unemployment was 2.7%, while by 2017-2018, male unemployment rose sharply to 24.7% and female unemployment to 19.8%; and again there is decline in male unemployment at 17.1% and female unemployment at 9.1% in 2022-23.

{Source: Computed from the unit-level datasets of different NSSO Employment and Unemployment Survey (1993-94 & 2011-12) and the Periodic Labour Force Survey (2017-18 & 2022-23)}

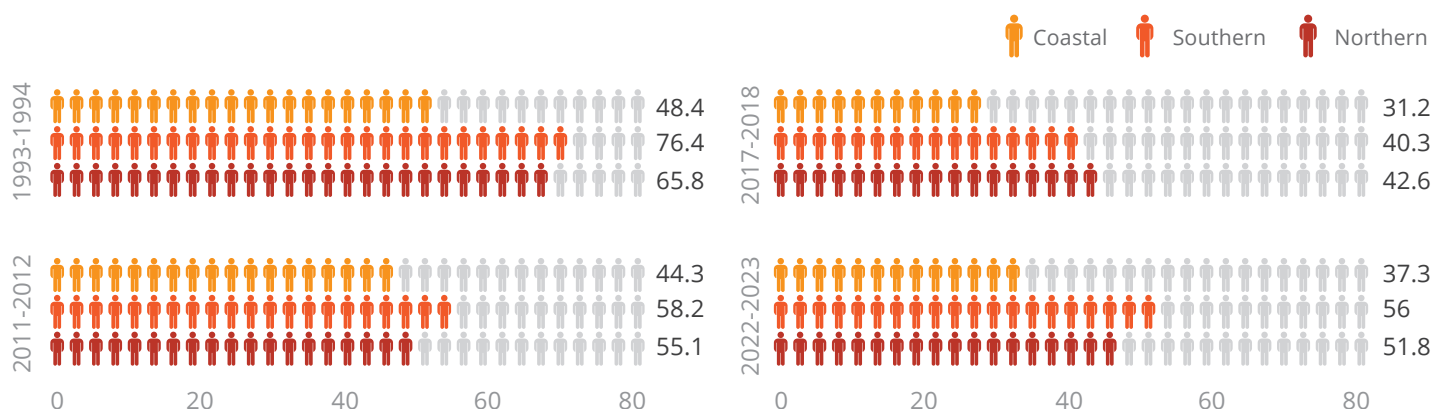

EMPLOYMENT SHARE ACROSS MAJOR SECTORS IN ODISHA : 1993-94 TO 2022-23 (IN %)

- Agricultural employment share has significantly declined from 73.8% to 47.1%, showing a consistent downward trend over the three decades.
- There is substantial growth in employment with a rise from 11.54% to 26.5% in industry sector and from 14.63% to 26.4% in service sector during the period 2011-12 to 2017-18.

{Source: Computed from the unit-level datasets of different NSSO Employment and Unemployment Survey (1993-94 & 2011-12) and the Periodic Labour Force Survey (2017-18 & 2022-23)}

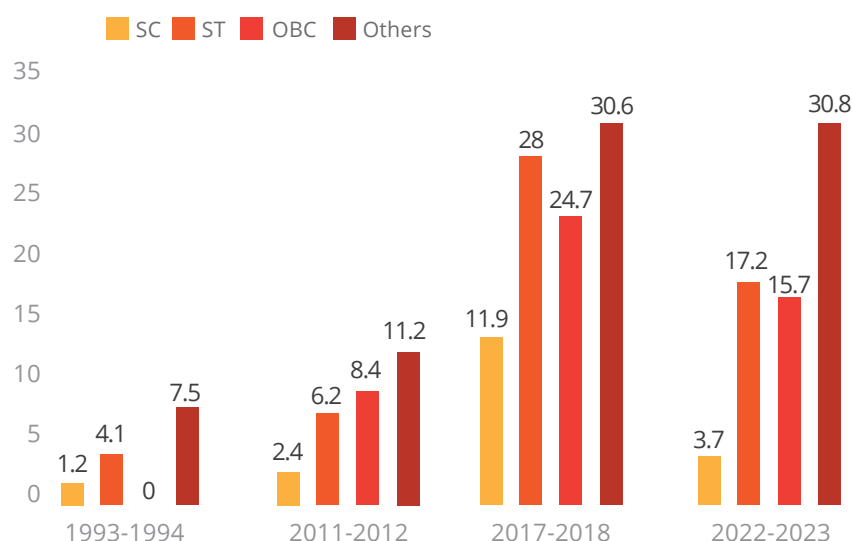

REGION WISE YOUTH (AGED 15-29) LFPR IN ODISHA (IN %)

{Source: Computed from the unit-level datasets of different NSSO Employment and Unemployment Survey (1993-94, 2004-05 & 2011-12) and the Periodic Labour Force Survey (2017-18, 2019-20 & 2022-23)}

- The Southern region consistently maintained the highest LFPR all throughout, except in 2017-18.
- The Coastal region shows the lowest LFPR among all regions, starting at 48.4% in 1993-94 and declining to 37.3% by 2022-23, with significant fluctuations including its lowest point of 31.2% in 2017-18.

YOUTH UNEMPLOYMENT RATE IN ODISHA ACROSS SOCIAL GROUPS (IN %)

The ST category had the lowest unemployment rates, starting at 1.2% in 1993-94, peaking at 11.9% in 2017-18, and falling to 3.7% in 2022-23.

{Source: Computed from the unit-level datasets of different NSSO Employment and Unemployment Survey (1993-94, 2004-05 & 2011-12) and the Periodic Labour Force Survey (2017-18, 2019-20 & 2022-23)}

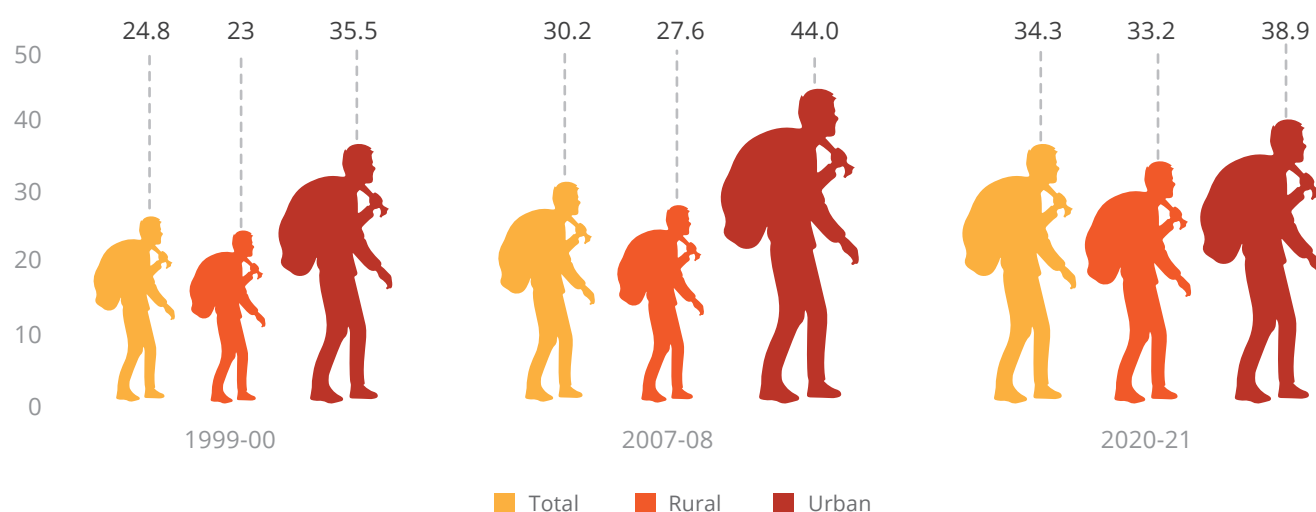

MIGRATION & URBANISATION

Migration in Odisha has increasingly shifted towards rural areas, with rates rising from 27.6% in 2007-08 to 33.2% in 2020-21, while urban migration dropped from 44.0% to 38.9% during the same period.

This trend suggests rural regions are becoming focal points for migration as urban centers may have limited appeal or become exclusionary to poorer migrants. Odisha remains one of the least urbanized states with only 18.5% of its population living in urban areas as of 2021, which is far below the national average of 34.5%.

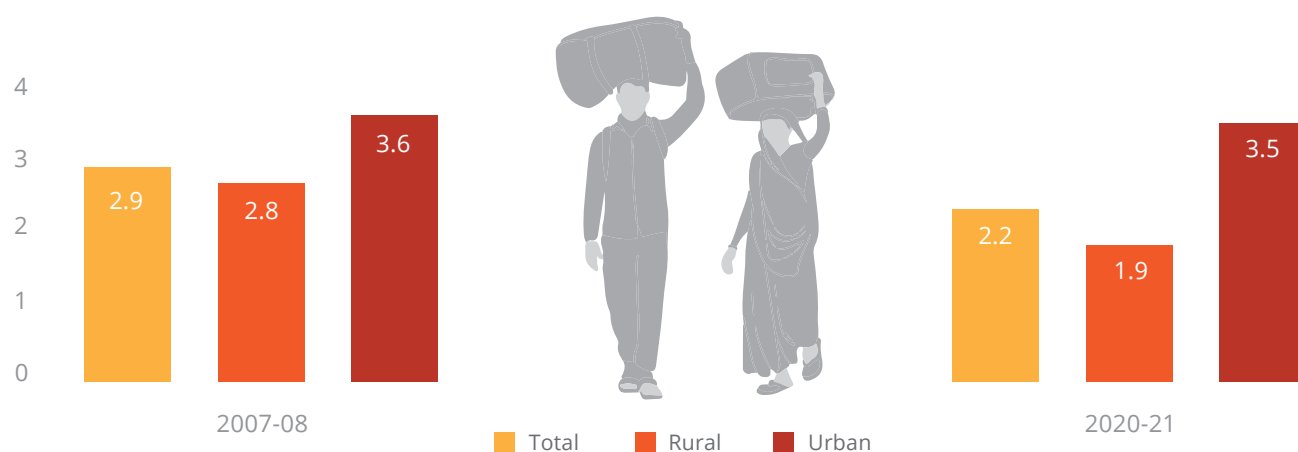

SHARE OF MIGRANTS IN TOTAL POPULATION (IN %)

{Source: Estimated from NSS 55th round (1999-00), NSS 64th round (2007-08) and PLFS 2020-21}

- The increase in migration rate in rural areas indicates that migration in the state in the last decade has been rural-directed; one of the reasons might be due to the increase in return migration during the COVID-19.
- The decline in migration rate in urban areas during the same period indicates that urban areas may have either failed to attract migrants or become exclusionary towards poor migrants from rural areas.

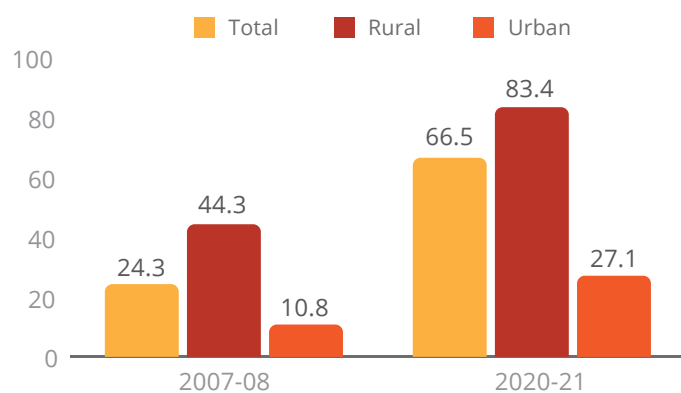

SHARE OF OUT-MIGRANTS IN TOTAL POPULATION (IN %)

{Source: Estimated from NSS 64th round (2007-08) and PLFS 2020-21}

Inter-state out-migration is becoming more selective and urban-origin in nature, which is likely to be for long term and of permanent nature.

SHARE OF RETURN MIGRATION IN TOTAL POPULATION (IN %)

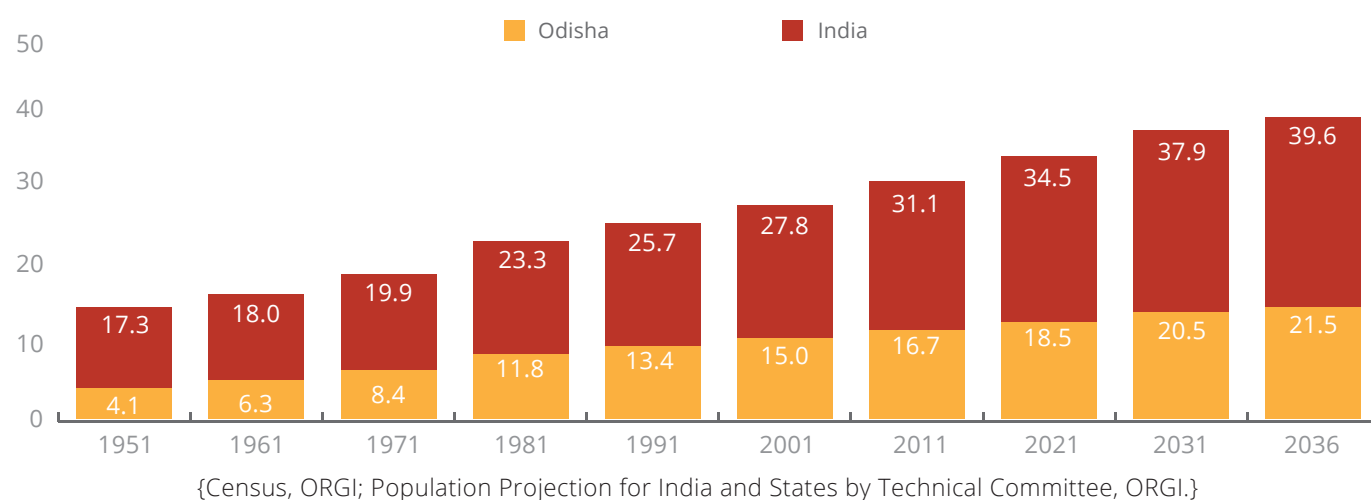

DISTRESS MIGRATION

- Out-migrants of Odisha in other states are finding difficulties in getting footholds which may result in their return to place of origin.
- A large portion of return migrants come from the KBK districts, long associated with distress-driven seasonal migration.

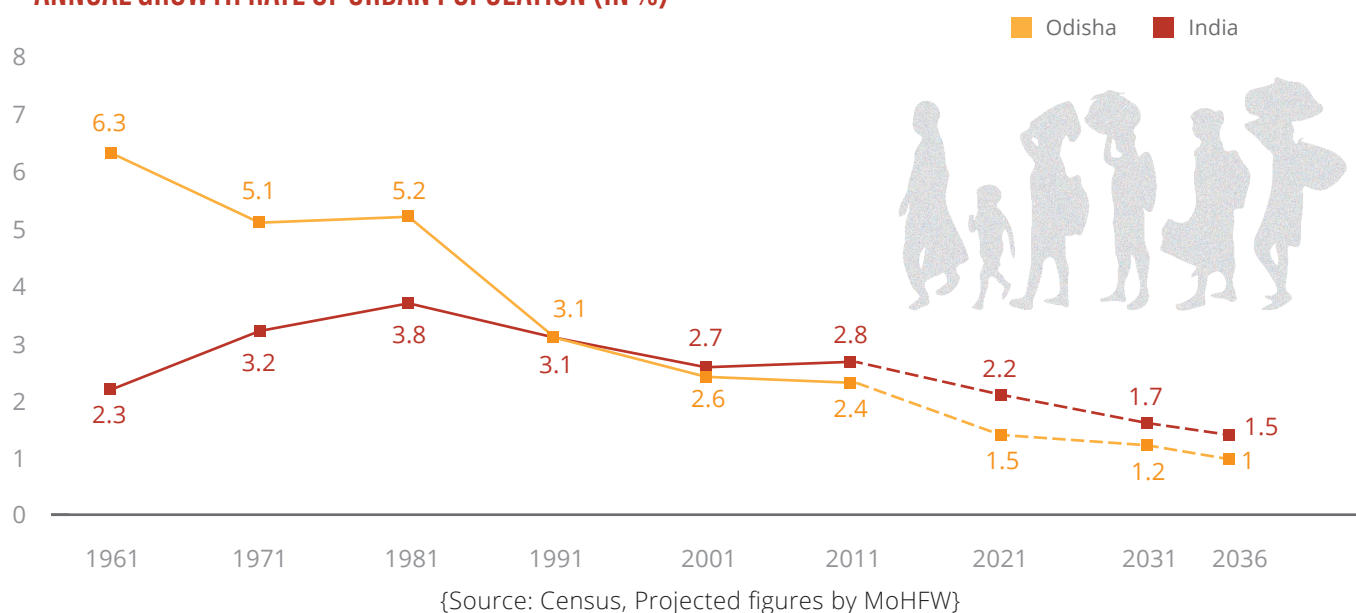

{Source: Estimated from NSS 64th round (2007-08) and PLFS 2020-21}

TRENDS AND PATTERNS OF URBANIZATION (% OF TOTAL POPULATION LIVING IN URBAN AREAS) IN ODISHA AND INDIA

- Odisha's urbanization increased from 4.1% in 1951 to 16.7% in 2011, still significantly below the national average of 31.1%. By 2036, Odisha's urban population is projected to reach 21.5%.
- Urban Agglomerations in Odisha have grown slowly and mostly cluster around, Twin city and a few towns of the state
- Southern and western Odisha remain under-urbanized, with districts like Baudh and Nuapada facing negative urban growth

ANNUAL GROWTH RATE OF URBAN POPULATION (IN %)

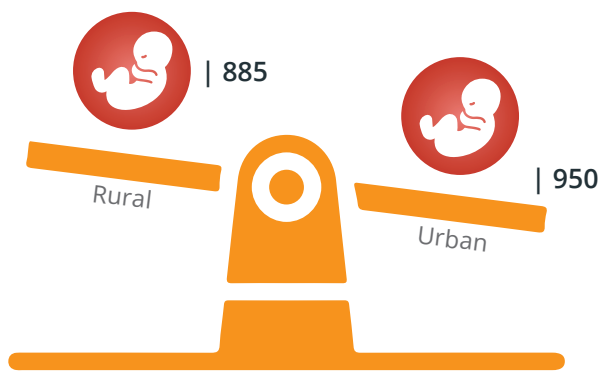

WOMEN'S SAFETY & SECURITY

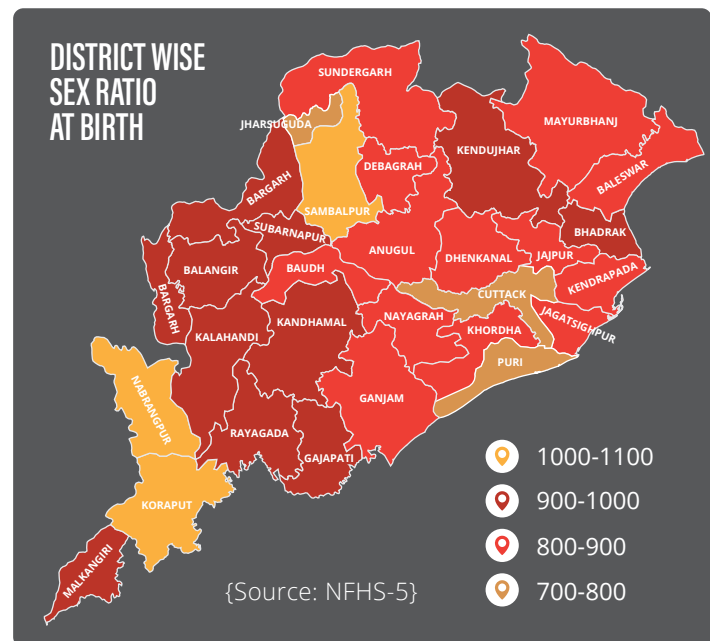

Odisha has demonstrated significant progress in achieving gender outcomes such as the attainment of education and a reduction in the incidence of crimes against women and gender-based violence.

However, the state needs sustained efforts to achieve the desired results under the SDG-5 (Gender Equality) by addressing the root causes of gender inequality and promoting safety and security of women at all levels.

SEX RATIO AT BIRTH (AMONG CHILDREN BORN IN LAST FIVE YEARS)

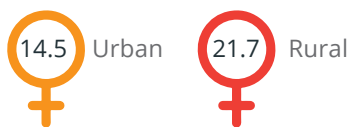

{Source: NFHS-5}

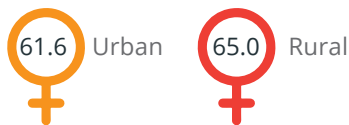

- The sex ratio at birth among the children born in last five years, indicates a clear rural-urban divide.
- In districts like Cuttack, Puri, Jharsuguda, the sex ratio at birth is alarming, below 800, posing significant issue for the state. Additionally, 13 other districts report a sex ratio at birth below 900.
- The state needs to develop actions to address the socio-cultural dimension of low sex ratio at birth.

WOMEN'S HEALTH (IN %)

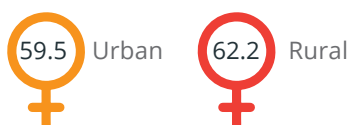

Women aged 20-24 years married before age 18 years

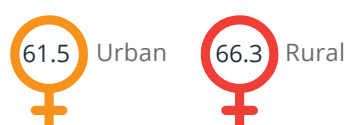

Non-pregnant women aged 15-49 years who are anaemic

Pregnant women aged 15-49 years who are anaemic

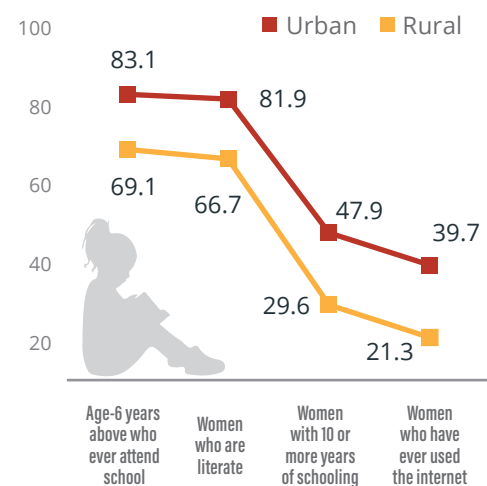

All women aged 15-49 years who are anaemic

{Source: NFHS-5}

WOMEN'S EDUCATION (IN %)

{Source: NFHS-5}

- 17 out of 100 women in urban areas and 31 out of 100 in rural Odisha have never attended school
- Only 30 out of 100 women in rural Odisha have completed 10 years of schooling

WOMEN EMPOWERMENT (IN %)

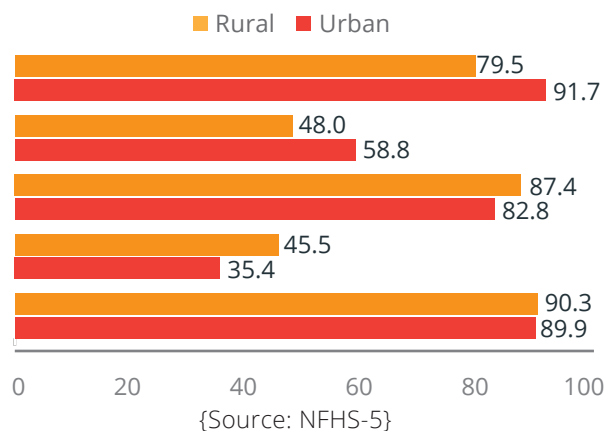

Women aged 15-24 years used hygienic protection methods-during menstruation

Women having mobile phone that they themselves use

Women having a bank or savings account that they themselves use

Women owning a house and /or land (alone or jointly with others)

Married women who usually participate in household decisions

- Currently, 90% of married women participate in household level decision-making processes.
- Female ownership of land or a house stands at 35.4% in urban areas, lower than 45.5% in rural Odisha. Additionally, 17% of women in urban areas don't have a bank account, and only 48% of rural women own a mobile phone.

GENDER BASED VIOLENCE

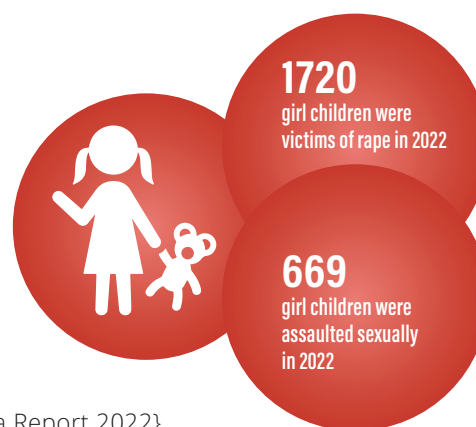

31 out of 100 ever-married women aged 18-49 years have experienced spousal violence

24 in every 100 women aged between 18-49 years have experienced physical violence during pregnancy in urban & rural area respectively

At least one in every 100 young women aged between 18-29 years have experienced sexual violence

{Source: NFHS-5, NCRB Crime in India Report 2022}

CRIME AGAINST GIRL CHILDREN

CRIME AGAINST WOMEN

689 Cases of Insult Modesty of Women

7327 Cases of Assault on Women with Intent to Outrage her Modesty

5308 Kidnapping and Abduction of Women

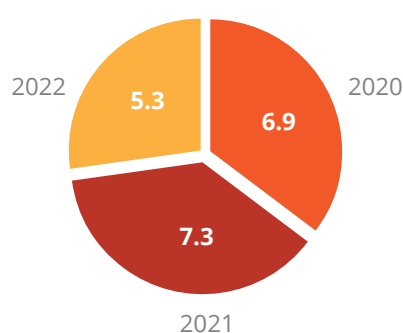

1463 Cases of women(>18 years)victims of Rape

161 Cases of attempt to commit rape

14 Cases of murder with rape/Gang rape

{Source: NCRB Crime in India Report 2022}

ODISHA'S SHARE OF TOTAL CRIMES AGAINST WOMEN IN INDIA (IN %)

Odisha witnessed **263** dowry deaths in 2022 which is **4.1%** of the national total.

{Source: NCRB Crime in India Report 2022}

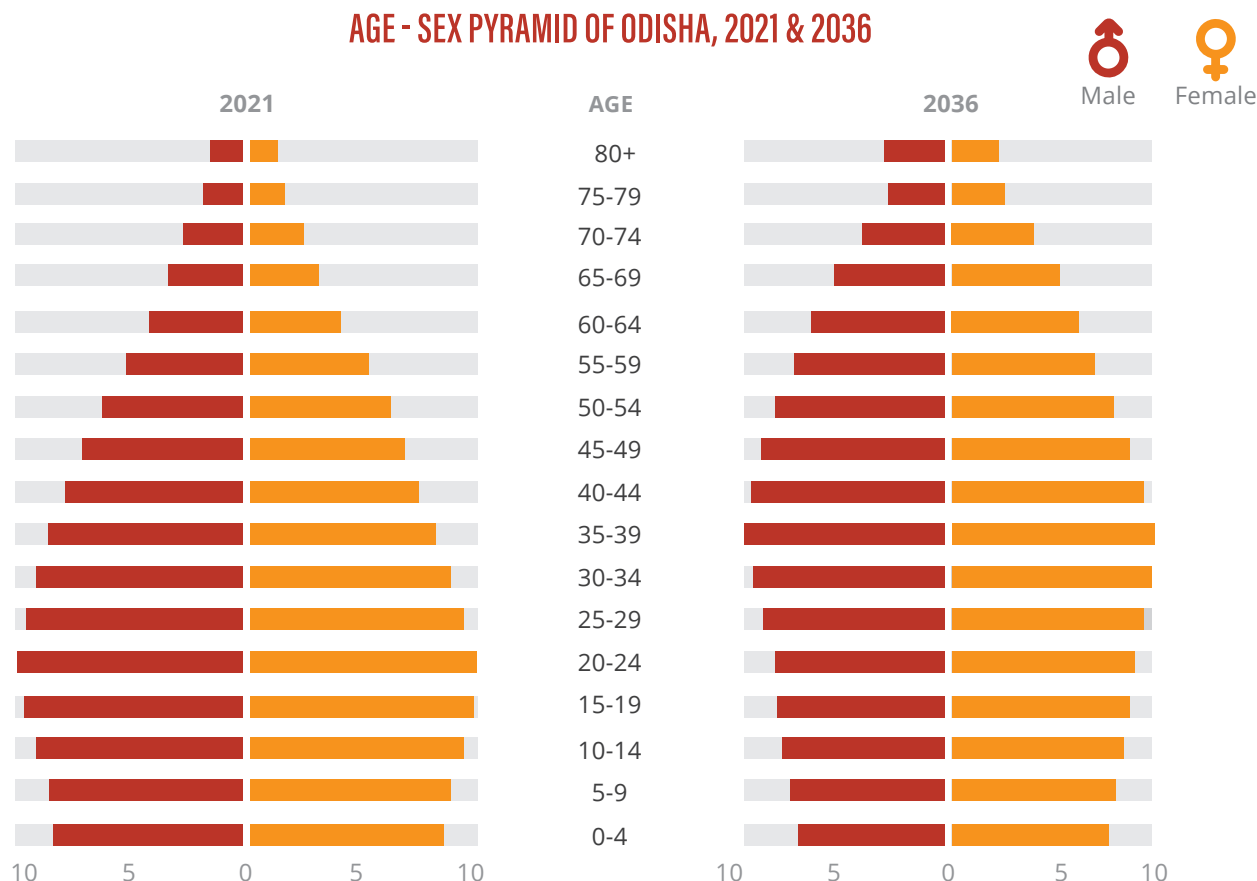

POPULATION AGEING

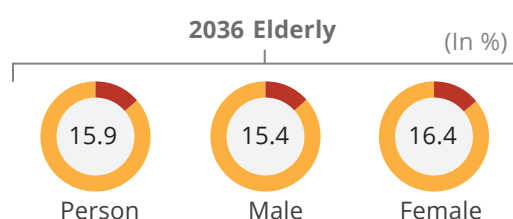

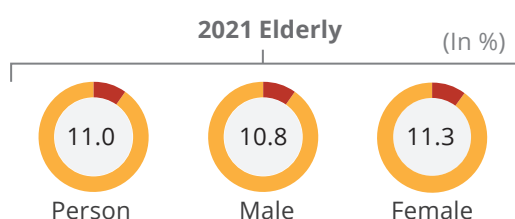

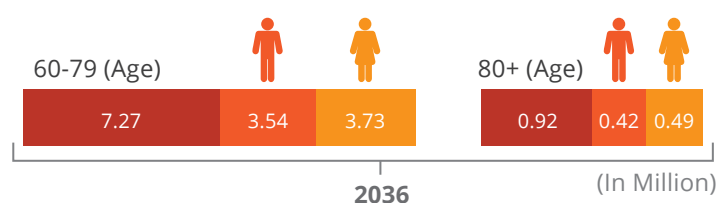

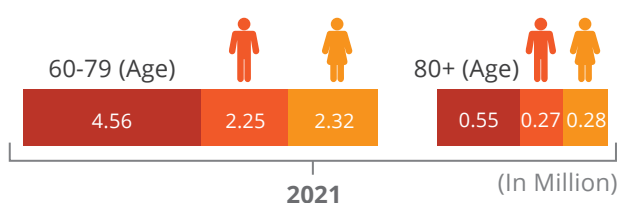

Odisha faces a significant demographic shift as its population ages, with projections showing that older individuals (Aged 60 and above) will make up 16% of the state population by 2036, up from 11% in 2021.

The sex ratio among older adults is anticipated to increase from 1033 females per 1000 males in 2021 to 1065 by 2036. The shift places heightened demands on Odisha's healthcare, social support, and economic systems, as many elderly individuals, particularly women, are more likely to be financially dependent and face challenges in accessing healthcare. While rural areas will remain home for most of the older population, limited infrastructure and resources may intensify these challenges.

AGE - SEX PYRAMID OF ODISHA, 2021 & 2036

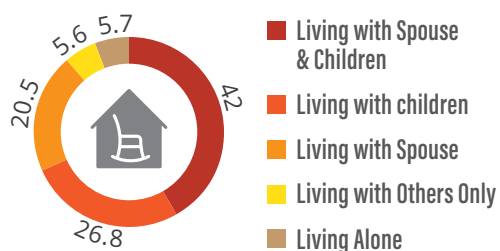

Odisha's elderly population (60+) is set to rise from 5.1 million in 2021 to 8.2 million by 2036, with the 80+ group growing from 0.55 million to 0.92 million, highlighting the need for focused ageing policies.

CHALLENGES | OPPORTUNITIES | WAY FORWARD

COLLABORATORS

The development challenges in Odisha are a "many hands problem" which necessitates a multi-stakeholder approach. In response, the Odisha Development Initiative (ODI) was established as a broad coalition bringing together Civil Society Organisations, Government, Academia, the Corporate Sector, Panchayati Raj Institutions, and the Media to foster collaboration. Central to this effort, five editions of the Odisha Vikash Conclaves (OVCs) have facilitated multi-stakeholder dialogues, creating a transformative development agenda for the state, aligned with the Sustainable Development Goals. The ODI also published the Odisha Development Report in 2020 addressing critical challenges and potential solutions.
